Your treatment plan begins
before you even arrive
at Dauterive Hospital!

Despite great advances in care, heart attacks remain a leading killer. Every minute counts for a successful outcome.

Dauterive Hospital, in conjunction with Acadian Ambulance and Physio-Control, a division of Medtronic, now has the ability to receive high quality 12-lead EKG information directly from paramedics in the field, before the patient even arrives in our ER.

In many cases, this allows valuable time to contact a cardiologist, mobilize the cath lab staff and make necessary preparations to provide you with life-saving treatment, saving precious time. Dauterive Hospital is proud to be the only facility in the Teche Area to offer this life-saving technology.
